

Belviq Preliminary Survey Results

Belviq is essentially an improved safe “phen-fen” and may have the same spectacular results. Our patients taking the “phen-fen” combination report losing 10-20 pounds or more without being hungry at all. They say they had to force themselves to eat, and that even their favourite foods would make them nauseous, as if they were sick. It is now available. The manufacturer is offering a 15 day free trial offer, and a \$75 a month off coupon.

We thank all of our patients for sharing their experience with Belviq. So far we are showing good results in many patients:

Drug	Maximum Weight Loss	Average Weight Loss	Minimum Weight Loss
Belviq Alone	8	3	0
Belviq and Phentermine	13	8	2

Most patients taking Belviq reported decreased appetite. Some had side effects of nausea, tiredness, and headache. Arena Pharmaceuticals does not recommend taking Belviq with phentermine or any other diet medication because the safety and efficacy of doing so has not been established.
